1. In the Windows Secrets Lounge there is a thread entitled Mac Word print to PDF, links inactive.
2. The URL of the thread mentioned in ¶1 is http://windowssecrets.com/forums/showthread.php/164206-Mac-Word-print-to-PDF-links-inactive (URL not formatted as link).
3. This file will be saved at http://www.jdawiseman.com/papers/bugs/20140909_LinksBug_Word.docx (URL not formatted as link, so here is another link to this file).
4. Starting from the Word document mentioned in ¶1, also linked from ¶2, ⌘P, bottom-left of window pop-up, 'PDF > Save as PDF…' will be saved as http://www.jdawiseman.com/papers/bugs/20140909_LinksBug_PDF.pdf (URL not formatted as link, so here is another link to that PDF).
5. Same as ¶4, except 'PDF > Save as Adobe PDF', and the document will be saved at http://www.jdawiseman.com/papers/bugs/20140909_LinksBug_Adobe.pdf (in this ¶5 I allowed Word to format the URL as a link).
6. And, same as ¶5 which was in turn like ¶4, 'PDF > Save as PostScript…', at http://www.jdawiseman.com/papers/bugs/20140909_LinksBug_PostScript.ps (and in ¶6, as in ¶5, URL formatted as link).
7. Please post bug fixes in the thread linked from ¶1 and ¶2, or send them to the author. Contact information at http://www.jdawiseman.com/author.html.
